

LightAir

Agro Pro

Clean Air Technology

LightAir – Air as life intended it.

In all modesty: Nobody – or no air purifier, rather – delivers healthier indoor air to homes and workplaces than LightAir. Period. That’s a scientifically proven fact.

We’re talking about air purifiers that can remove up to 99.97% of all fine and ultra-fine particles. Plus neutralize more than 97% of virus already in the air!

What you get with LightAir is, simply put, air as life intended it.

And you get it totally without disturbing noise, totally without expensive filters, and totally without unhealthy ozone production.

The secret is ionization.

Say goodbye to filters – and pardon us for getting a bit technical – here’s the inherent problem with all filters and why we’ve done away with them:

The real hazards to our health come with particles that are smaller than 0.1 micron (one ten thousandth of a millimeter), the kind LightAir goes after. These ultra fine particles make up more than 90% of the bad things we draw into our lungs. Ninety-plus percent.

Now, if you want to catch these little bandits with a filter, it has to be extremely

fine. However, pushing air through a fine filter not only creates a lot of noise and consumes considerable energy, but the filter itself also quickly clogs up. A less fine filter might reduce these problems, but then the efficiency of the filter would be reduced as well.

So, how do we do it? Well, picture a magnet, not a vacuum cleaner (conventional air purifiers). Instead of sucking air through a filter, we simply make the air particles in a room – virus, mold, allergens, and plain old dirt – “magnetic” by giving them a tiny negative charge. It’s called ionization and that is what attracts the particles to our positively charged particle collector.

Depending on your needs, LightAir offers products from two types of patented technologies: high-efficiency IonFlow and high-capacity CellFlow. Both technologies have taken air purification to another level, where filters are a thing of the past, meaning you will no longer have to spend money on expensive filters. LightAir’s products are not only essential for your health, but also market leaders when it comes to efficiency and energy consumption. Feel, hear and breathe the difference with LightAir - engineered and designed in Sweden.

Breathe easy and enjoy life.

Cleans the air from above.

Dimensions:
5x14 inches/13x35 cm

Weight:
4.8 lbs/2.2 kg (excl. adapter)

Room size:
Approx. 540 sq ft/50 m²

Noise level:
21 dB (A)

Energy consumption:
5W

Soundless

99.94%

Ultra-fine particle reduction

Inactivate >97% virus in the air

Ozone free

Filterless

IonFlow Agro Pro provides every work place with an environment virtually free from pollutants and virus.

The only air purifier in the world that works hanging

from a ceiling. It frees up floor space, making it especially suitable for schools, nurseries, clinics, and small offices. With IonFlow Agro Pro you will have a completely silent air

purifier that removes allergens, virus, and other pollutants in the air. Scientifically tested and approved to prevent the spread of air-borne virus.

Top 5 benefits of IonFlow air purifiers.

99.94%

Ultra-fine particle reduction

IonFlow air purifiers effectively remove the smallest and most harmful particles such as virus, mold, traffic pollution, pollen, etc. all the way down to 0.007 micron (PM0.007).

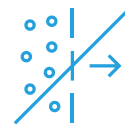

Inactivate >97% virus in the air

LightAir is your best protection against microbes in the air, such as virus, bacteria and mold. This makes it the best and most efficient air purifier for allergy, asthma, COPD, pregnant, infants, children and other people sensitive to influenza and other infections. According to a seven years scientific research study LightAir IonFlow air purifiers make 97% of virus harmless immediately in the air making sure they will never bother you.

Soundless

This air purifier will not interrupt your activities or precious sleep! Put it in a bedroom or office and no one will be disturbed! Operates at 21 decibels (compared to 35-80 decibels for HEPA filter systems).

Filterless

No need to ever buy an expensive filter again, instead use a LightAir reusable particle collector that you easily rinse in water. The fact that you never need to buy a filter will save you lots of money in comparison to filter based air purifiers. Add the environmental aspect and the whole world is a winner!

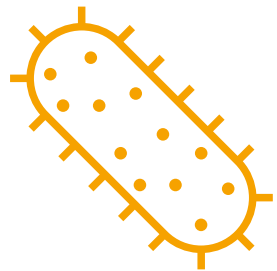

Cost saving

There's nothing to replace and no need to ever buy an expensive filter again. This will save you \$50-400 per year compared to typical filter-based air purifiers. Combined with lower electricity costs, savings will go into the hundreds of dollars per year—enough to pay for a second IonFlow air purifier.

Unique ionizing technology prevents airborne flu virus infection

LifeAir air purifiers are scientifically proven to neutralize more than 97% of virus in the air! The virus are made harmless immediately in the air as the negative ions attach to them making sure they will never bother you.

This is your best protection against influenza and other infections caused by airborne virus, bacteria and other microbes.

The observation that significantly higher numbers of rotavirus and CaCV particles were detected on the active ionizer versus inactive ionizer (~ 1500-3000 times) led to the conclusion that this technique can actively and efficiently collect virus particles from the air.

I do my utmost to ensure that the horses in my stable are healthy and compete to win competitions. It is immediately noticeable when a horse is feeling unwell. I have always been careful with disinfection and and I have changed the entire ventilation of my stables.

LightAir is the perfect choice. I installed the AgroPro in every second box and it has helped to minimize infections. I have not had any major outbreaks and have noticed that the horses maintain even quality during the year. The purifier is also extremely easy to handle & maintain. It needs to be cleaned every fourteen days and requires no other maintenance and no consumables.

Svante Båth
Stall Svante Båth

Svante Båth, born 1964, is a trotting coach at Bergsåkers trotting track outside Sundsvall with about 70 (2012) horses in their training. Båth has trained famous horses such as "Everest Ås, Express Lavec, King Lavec, Luxury Ås, Malabar Circle Ås".
